Mr. Michael A. Gallucci
Space Environment Laboratory
National Oceanic and Atmospheric Administration
Boulder, Colorado 80302

Dear Mike:

Thank you for the list of items for the archive tapes. I have gone over them again and, although I have a nagging feeling that we might someday wish we had included the lunar position data, I can't really justify including these items routinely. We always have the option of going back to the OA tape for the information if we need it.

Sincerely yours,

Carl O. Bostrom

October 2, 1973

Dr. Carl O. Bostrom
The Applied Physics Laboratory
8621 Georgia Avenue
Silver Spring, Maryland 20910

Dear Dr. Bostrom:

This letter is the follow-up to our phone conversation on Friday, September 28.

Attached are (1) the tentative list of archive tape items that will be included on each record of the archive tape, and (2) a complete list of coordinate information. Those coordinate items on attachment #2 with asterisks beside them have already been agreed to appear on the archive tape.

If you wish to include further coordinate information, or have any questions regarding these items, please contact either Don Williams or me at your earliest convenience. If you wish to contact me by phone, I can be reached at FTS No. (303) 499-3997.

Sincerely,

A handwritten signature in cursive script, reading "Michael A. Gallucci".

Michael A. Gallucci

* 79	" "	
80	" "	Spare
81	Fixed Pt.	FORTRAN record size indicator (=000117010001 ₈) This indicates a total data word count of 79 ₁₀ words.

Notes:

Longitude is positive east of Greenwich and negative west of Greenwich
(-180° to +180°)

North latitude is positive and south latitude is negative (-90° to +90°)
Date of data (word number 67) equals day + 100 (months + year (100)). Example:
February 10, 1967 at 2 hours U.T. is recorded as 670210 in word 67, 41 in
day count (word 1), 7200000 in milliseconds of day (word 2), and 67 in year
of data (word 72).

Words 54-56, 59, 60, 63-65 pertaining to magnetic field model will be set =
zero unless the spacecraft fails to achieve the proper orbit and perigee
is close enough to warrant the computation of these values.

TENTATIVE LIST OF ARCHIVE TAPE ITEMS*

1	Satellite I.D. ("IMPH")			
2	Year			
3	Day of year			
4	Time of day (in milliseconds)			
5	Orbit number			
6-21	DPP channel values (16)			
22-37	APP channel values** (16)			
38	Album number			
39	Page number			
40	APP change***			
41	Mode (e.g., CAL-RUN, CAL-STBY, CAL-OFF)			
42	Satellite clock (in milliseconds)			
43-58	L1 counts/sector	sectors	1-16	} SNAPSHOT 1
59-74	L3	"	" 1-16	
75-82	L5	"	" 1-8	
83-90	L9	"	" 1-8	
91-106	L2	"	" 1-16	} SNAPSHOT 2
107-122	L4	"	" 1-16	
123-130	L6	"	" 1-8

179-186	L11	"	" 1-8	
187-202	G1	"	" 1-16	} SNAPSHOT 0
203-218	L8	"	" 1-16	
219-226	G2	"	" 1-8	
227-234	G3	"	" 1-8	
235-238	DPP change***	(4)		
239-242	DPP force flags	(4)		

* Each archive tape record will contain items #1-259. Coordinate information will be linearly interpolated to synchronize with the data. One record corresponds to one page (app. 20 seconds) of data.

** Converted to engineering units (e.g., APP-1 = 12.80 means the satellite temperature reads 12.80 C°).

*** During one page of data one APP channel and four DPP channels will change. These data items are the channel numbers which changed for the given page.

243	Longitude (deg.)	} Geocentric Coordinates	} Satellite Position

C P M E DECOM Tapes

7/26/72 - Mel Banks said 4 days (approximately) per tape.
(max of 58 files)
9594 bytes / 4 albums = 5.5 minutes

$$9594 \times 8 = 76752 \text{ bits} / 6 = 12792 \text{ frames}$$

$$12792 \text{ frames} / 800 \text{ BPI} = 16 \text{ inches} + .75 \text{ " gap}$$

$$= 16.75 \text{ inches} / 5.5 \text{ minutes}$$

$$2000' / \text{tape} = \frac{24000 \text{ inches} / \text{tape}}{16.75 \text{ inches} / 5.5 \text{ mins.}} = 1432 \times 5.5 \text{ mins} / \text{tape}$$

$$= 7880 \text{ mins} / \text{tape}$$

$$= \boxed{5.4 \text{ days} / \text{tape}}$$

$$2300' / \text{tape} = \frac{27600 \times 5.5}{16.75} = 9062 \text{ mins} / \text{tape} = 6.2 \text{ days}$$

CPME archive tapes

1 LRECL - (2 albums) = 14,508 bytes

1 Phys. Rec (4 albums) = 29,016 "

$$29,016 \text{ frames} / 1600 = 18.135'' + .75' \text{ gap} \\ = \underline{19''} / 5.5 \text{ mins}$$

$$2000' \text{ tape} = \frac{24000' T}{19'' / 5.5 \text{ mins}} = \frac{24000 \times 5.5 \text{ mins}}{19''} \text{ mins/tape}$$

$$= 6947 \text{ mins/tape}$$

$$= \boxed{4.8 \text{ days/tape}}$$

Decom tape will
contain 4 days/tape

MST

$$1440 \text{ mins/day} * 4 \text{ days/week} = 5760 \text{ mins/week}$$

$$5760 / 5.5 \text{ min} = 1047 \text{ av. tapes}$$

$$1047 \text{ av. tapes} * 3012 \text{ bytes/AV} = 3,154,385 \text{ bytes/tape}$$

@ 1600 BPI and 10 to 1 blocking

$$100 - 30K \text{ blocks} = \left(\frac{30000 \text{ bytes}}{1600 \text{ Bytes/inch}} + .75'' \right) * 100$$

$$= 19.5 * 100 = \frac{1950''}{12''/ft}$$

$$= 162' \text{ per decom tape}$$

or about 12 Decom tapes/MST
at 1600 bpi & 30K blocks
